

Appl. No. 10/033,346
Amdt. Date Aug. , 2003
Reply to Office Action of May 6, 2003

Amendments to the Specification

On page 8, please amend paragraph [0025] as follows.

[0025] The rubber loop 7 is then fittingly secured in the recess 211 of the base 2. The cover 1 is then secured to the base 2, thereby pressing the retainers 4 and the holders [[5]] 6 and preventing them from moving vertically. Simultaneously, the cover 1 presses the rubber loop 7, thereby providing a tight seal between the cover 1 and the base 2. Finally, the screws (not shown) are inserted through apertures (not labeled) of the cover 1 to ~~engaging-engage~~ in the screw holes 213 of the base 2. The cover 1 and the base 2 are thereby firmly secured together.
